

Pin the Fin

Answer Key:

Anal fin

the fin on the lower side of the body near the tail, used for balance.

Lateral line

a series of sensory pores (small openings) that are located along the sides of fish - they sense vibrations in the water.

Caudal fin

the tail fin used for forward movement and speed!

Mouth

the part of the body which the fish uses to catch food - it is located at the front of the body.

Dorsal fin

the fin on the upper side of the body, used for balance and staying upright.

Pectoral fin

each of the paired fins on either side of the body, near the head, used for steering.

Eye

sight organs located on the head.

Pelvic fin

each of the paired fins on the underside of the body, nearer the head, used for steering.

Gills

fleshy organs that are used for breathing, located on the side of the head and have a gill cover.
